PRACTICAL NUTRITION AND DIETETICS
Aim:
To understand the relationship of weight and volume.

Materials needed:
Weighing machine, measuring cups, measuring spoons, knife, and vessels.

Measuring techniques of liquids and solids:
1. Dry ingredients, such as sugar and flour are measured in plastic and metal measuring cups.
2. Scoop the flour into the dry measuring cup, filling to overflowing. Level the flour off by dragging the straight-edged utensil across the top of the measuring cup.
3. When small amounts of dry ingredients such as flour, sugar and baking powder, baking soda, salt and spices are to be measured – measuring spoons can be used.
4. Measuring cups for liquid ingredients must be placed on a level surface when measuring. Avoid lifting the cup to read the measure as it will probably tilt causing you to read inaccurate amount.
5. Read the level of the liquid by bending down so that the measuring cup is at eye level. Read the liquid level at the bottoms of meniscus.
6. Small amounts of liquid ingredient can be measured using measuring spoons.

Give the capacity of the following:
1. One tea cup ----- gms
2. One teaspoon ----- gms
3. One tablespoon ----- gms
4. ¼ cup ----- tsp
5. 2 table spoon ----- tsp
Measuring Dry Ingredients

For dry ingredients including flour, sugar, and salt, use dry measuring cups & spoons.

CEREAL COOKERY

EX.NO. 4

Aim:
To prepare a cereal based weaning food.

Role of cereal in cookery

- Cereals are used as thickening agent, e.g., corn flour in custards, corn flour in white sauce and macaroni in soups.
- Cereals are used as coating agent, e.g., Maida paste in Cutlets or bread Crumbs in cutlets.
- Cereals are used in sweet preparations, e.g., Rice Payasam and Wheat Halwa.
- Malted cereals are used in the preparation of beverages and weaning mixes.

Weaning is the gradual introduction of solid foods until the child is able to eat the food as the rest of the family. It is a replacement of breast feeding with other foods. Some of the weaning foods are well mashed cooked vegetables such as Potato, Sweet Potato, Carrot, Fruit Puree such as cooked Apple, Pear, Mango, Papaya, Banana etc. Well cooked cereal can be given to fulfill their appetite.

Formulation of recipe

</tr>
</tbody>
</table>
### Method
- Soak the above ingredients overnight in separate containers.
- Drain the water and tie the ingredients in separate clean moist muslin cloth.
- Keep in a warm place and allow to sprout.
- Once the sprouts appear, dry roast each cereal separately in a pan to remove excess moisture.

### Results and Conclusion
Cereal based weaning food provides required calories and proteins to supplement the needs of an infant.

### PULSE COOKERY

**Aim:** To prepare a recipe using germinated pulses

**Role of Pulse in cookery**

- They contribute to fermentation in Idli and Dosai batter.
- They are used in snacks like sundal, bajji, etc.

**Sprouting of Green Grams**
Germination is a process in which the nutritive value of the grams is improved. During sprouting minerals like calcium, zinc, and iron are released from bound form. Vitamin C is synthesized during germination. Thickening power in starch is reduced due to conversion of starch to sugars. Germination improves taste and texture. Germinated pulses add variety to the diet.

**Formulation of recipe**

**Germinated green gram salad**
Soak the green grams for at least 8 hours in fresh cool water in a wide mouth vessel.

Drain and rinse the green gram. Tie it in muslin cloth sprinkle water whenever the cloth gets dried. In a day or two days germination takes place.
